Procedure: Add Phase A to the main beaker. Mix ingredients of Phase B together until it is uniform and add it to Phase A with mixing. Combine ingredients of Phase D together. Mix and heat to 70°C until it is clear. Cool it down to 35-40°C. Mix ingredients of Phase C together. Add Phase D into Phase C. Mix well. Add Phase C+D into the main beaker. Mix well. Get the product through the syringe while it is mixing. Pour into packaging components. This product will begin to separate.
